

Data assimilation and inverse problems – Homework Set 6

Final project preparation.

1. Make a plan for what your final project will be. Ideally, a final project would relate or apply some of the material you learned about in class to your own research. If you are early on in your career as a scientist, or if your research is not relatable to data assimilation, please come talk to me and I can provide some inspiration. The final project should be about the same “size” as any of the previous homework assignments.
